

AMENDMENTS TO THE CLAIMS:

Claims 1-15 (canceled)

Claim 16 (new): A cleaning device for an internal combustion engine by way of suction force generated at an air-inlet tube, comprising:

a container for storing a cleaning solution;

a suction generator connected in series with said air-inlet tube of said internal combustion engine;

wherein said suction generator is provided at a middle section with a tapered air passage, a lateral side of said tapered air passage having a suction hole connected with a nozzle which is externally connected to a guiding tube, a pivotal shaft is mounted at a center of said suction generator and provided with a blocking plate;

whereby said blocking plate can be rotated to change covered area of said tapered air passage thereby adjusting air flowrate therethrough.
